Index to Volume 11 ■ 2004

This index covers JAMIA issues for 2004 as follows: Jan–Feb, pages 1–94; Mar–Apr, pages 95–166; May–Jun, pages 167–234; Jul–Aug, pages 235–338; Sep–Oct, pages 339–438; Nov–Dec, pages 439–548.

SUBJECTS

A

Abbot, Patricia, RN, PhD
ACMI Fellow, 2003, 225

Academic health care centers
implementation of a computerized physician order entry system in, 207–216

Academic health care settings
development of Web-based event reporting system in, 11–18
differences in satisfaction with electronic health records between residents of two medical specialties, 43–49
impacts of computerized physician documentation in a teaching hospital, 300–309
methodology for annotating digital images for context-appropriate use in, 29–41

Acceptance models
for patients' acceptance of provider-delivered E-health, 241–248

Ackerman, Michael, PhD
recipient of AMIA President's Award for 2003, 234

Adverse drug events
automated safety alerts for inpatient digoxin use with computerized physician order entry, 270–277
drug allergy alert overrides in computerized physician order entry systems, 482–491
drug database model as central element for computer-supported dose adjustment within a CPOE system, 427–432
organization and representation of patient safety data, 468–478
strategies for detecting among older persons in ambulatory setting, 492–498
using computer technology to detect, measure, and prevent, 535–536 (Editorial Comments)
Web-based event reporting system, development of in academic environment, 11–18

Alerts, *see* Automated safety alerts

Allergies, to drugs, *see* Drug allergy alerts

Ambulatory care settings
strategies for detecting adverse drug events among older persons in, 492–498

American College of Medical Informatics (ACMI)
Fellows and International Associates for 2003, 225–233
presentation of Morris F. Collen Award to William E. Hammond, II, PhD, 221–224
report on impact of Biomedical Information Science and Technology Initiative (BISTI), 162–172

American Medical Informatics Association (AMIA)
bridging the digital divide to reach vulnerable populations, 448–457 (AMIA White Paper)
Connecting for Health Award, 234
President's Awards for 2003, 234

Anderson, James G., PhD
ACMI Fellow, 2003, 225–226

Annotation methodology
for annotating digital images for context-appropriate use, 29–41

Antibiotics
model for automated extraction and visualization of antimicrobial activity spectra, 285–293

Antimicrobials
information resources used during antimicrobial prescribing, 281–284

Applications, of information technology
asthma kiosk, for collaborative decision support in the emergency department, 458–467
design of Genetics Home Reference 439-447, 439–447
metadata management system for managing complex change in clinical studies, 380–391
method for annotating digital images for context-appropriate use, 29–41
overcoming structural constraints to patient utilization of electronic medical records, 151–161
Palm-based Clinical Information System (PalmCIS), reducing medical errors via use of, 19–28
portability of informatics capabilities from a clinical application to a bioscience application, 294–299
sharable computer-interpretable guidelines, InterMed approach to, 1–10
Web-based event reporting system, development of in academic environment, 11–18

Asthma kiosk
patient-centered technology for collaborative decision support in the emergency department, 458–467

ATHENA decision support system
organizational issues in implementation of, for hypertension, 368–376

Audience response software
using personal digital assistants as a classroom polling tool, 217–220

Automated e-mail messaging
as tool for Internet smoking cessation intervention, 235–240

Automated safety alerts
drug allergy alert overrides in computerized physician order entry systems, 482–491
for inpatient digoxin use with computerized physician order entry, 270–277
for potassium testing in patients on diuretics, 433–434 (Letter), 435 (Reply)

B
Bates, David, MD
recipient of AMIA President's Award for 2003, 234
Behavior, health-seeking
and patient Internet use for health information at primary care clinics, 499–504
Bioinformatics, field of
framework for interoperability of bioscience databases, 523–534
portability of informatics capabilities from a clinical application to a bioscience application, 294–299
report on impact of Biomedical Information Science and Technology Initiative (BISTI) on training in, 168–169
Biologists
Jamison: *Perl Programming for Biologists* (Book Review), 173
Biomedical information retrieval
dictionary-based system for identification of protein names in Medline abstracts, 174–178
Biomedical Information Science and Technology Initiative (BISTI)
impact of, on training of informaticians, 162–172
Biosciences, *see* Bioinformatics
Bioterrorism preparedness
implementing syndromic surveillance, 141–150
Blair, Jeffery S., MBA
ACMI Fellow, 2003, 226
Book reviews
Al-Ubaydli: *Handheld Computers for Doctors*, 42
Jamison: *Perl Programming for Biologists*, 173

C
Cellular radio telecommunication
for health care, benefits and risks, 479–481
Clinical applications, of informatics
portability of informatics capabilities from a clinical application to a bioscience application, 294–299
see also Applications, of information technology
Clinical decision support, *see* Decision support systems
Clinical guidelines
comparative impact of electronic access to guidelines, clinical data, and decision support on prescribing decisions, 71–77
computer-interpretable, GuideLine Interchange Format (GLIF) from InterMed, 1–10
Clinical Information Access Program (CIAP)
survey of clinicians' use of to support patient care, 113–120
Clinical information systems
consensus action agenda for achieving the National Health Information Infrastructure, 332–338 (Position Paper)
PalmCIS, use of to reduce medical errors, 19–28
Clinical note capture tool
implementing inpatient clinical note capture via a provider order entry system, 310–316
Clinical practice guidelines, *see* Guidelines, clinical
Clinical reminders, computerized
for HIV care, human factors barriers to effective use of ten, 50–59
to reduce use of medications during shortages, 278–280
Clinical studies
managing complex change in metadata, 380–391
Clinical text
automated encoding of based on natural language processing, 392–402
Coding methods
automated encoding of clinical documents based on natural language processing, 392–402
Collen Award
presentation William E. Hammond, II, PhD, 221–224
Communications
content analysis of e-mail communications between patients and providers, 249–259
help for physicians contemplating use of e-mail with patients, 268–269 (Editorial Comments)
patient experiences with access to electronic health records and linked Web messaging, 505–513
Computer-aided pharmacist order entry
justification of pharmacist's role in, 125–126 (Letter), 127–128 (Reply)
Computer-assisted interview system
usability of, for unaided self-entry of patient data, 249–259
Computer-interpretable guidelines
GuideLine Interchange Format (GLIF) from InterMed, 1–10
Computerized clinical reminders
for HIV care, human factors barriers to effective use of ten, 50–59
to reduce use of medications during shortages, 278–280
Computerized Patient Record System (CPRS)
at Veterans' Administration Medical Centers
as data source for Quality Enhancement Research Initiative (QUERI), 346–350
computerized physician documentation in, impact at a teaching hospital, 300–309
information resources used in antimicrobial prescribing with, 281–284
Computerized physician documentation
impacts of in a teaching hospital, 300–309
Computerized physician order entry (CPOE)
automated safety alerts for inpatient digoxin use with, 270–277
drug allergy alert overrides in, characteristics and consequences of, 482–491
drug database model as central element for computer-supported dose adjustment within, 427–432
helpful or harmful?, 100–103
benefits for patient care, 101–102
effect on total health care costs, 102
reasons for, 100–101
implementation of in a large Dutch university medical center, 207–216
implementing inpatient clinical note capture via, 310–316
nature of errors in patient care information systems, 104–112

pharmacist's role in, 125–126 (Letter), 127–128 (Reply)
physicians, information technology, and health care systems (Editorial Comments), 121–124
results of 2002 survey in U.S. hospitals, 95–99
Congestive heart failure
use of a patient-accessible electronic medical record in practice for, 410–417
Connecting for Health Award (AMIA), 234
Consent, patient
design and implementation of electronic consumer consent mechanisms, 129–140
example transaction models, 138–140
Consumers, of health care services
frequency-based technique to improve spelling suggestions rank in medical queries, 179–185
patient utilization of electronic medical records, overcoming structural constraints to, 151–161
Content analysis
of e-mail communications between patients and providers, 249–259
Covvey, H. Dominic J., MSc
ACMI Fellow, 2003, 226
CPOE, *see* Computerized physician order entry

D
Data entry
row modeling applied to generic structured recording of medical narrative data, 162–165
usability of computer-assisted interview system for unaided self-entry of patient data, 249–259
Data management systems
managing complex change in clinical study metadata with TrialDB, 380–391
Data quality
comparison of multiple data sources to identify vaccinations for veterans with spinal cord injuries and disorders, 377–379
of EHRs in general practice, impact of assessments, feedback, and training on, 78–86
Database mediator framework
Query Integrator System (QIS), as framework for biomedical database federation, 523–534
Decision support systems
asthma kiosk, for collaborative decision support in the emergency department, 458–467
automated safety alerts for inpatient digoxin use with computerized physician order entry, 270–277
computerized reminders reduce use of medications during shortages, 278–280
for prescribing, comparative impact of electronic access to guidelines, clinical data, and, 71–77
organizational issues in implementation of ATHENA DSS, for hypertension, 368–376
role in quality improvement at Veterans' Health Administration (VHA), 348
Diamond, Carol, MD
AMIA Connecting for Health Award, 234
Dictated reports
electronic screening of dictated reports to identify patients with do-not-resuscitate orders, 403–409
Dictionary-based system
for identification of protein names in Medline abstracts, 174–178
Digital divide
bridging the digital divide to reach vulnerable populations, 448–457 (AMIA White Paper)
Digital images
method for annotating for context-appropriate use, 29–41
Digoxin
automated safety alerts for inpatient digoxin use with computerized physician order entry, 270–277
Disambiguation, word sense
multi-aspect comparison study of supervised, 320–331
Disparities, in health care
bridging the digital divide to reach vulnerable populations, 448–457 (AMIA White Paper)
Diuretics
computer alerts for potassium testing in patients on, 433–434 (Letter), 435 (Reply)
Do-not-resuscitate (DNR) orders
electronic screening of dictated reports to identify patients with, 403–409
Doctors, *see* Physicians
Documentation, computerized physician
impacts of in a teaching hospital, 300–309
Dosages, drug
drug database model as central element for computer-supported dose adjustment within a CPOE system, 427–432
Drug allergy alerts
characteristics and consequences of overrides of, in computerized physician order entry systems, 482–491
Drug reactions, *see* Adverse drug events
Drugs, prescription, *see* Electronic prescribing systems *and* Medications

E
E-Consent
design and implementation of consumer consent mechanisms, 129–140
E-Health
electronic interactions with patients (Special Focus), 235–269
automated e-mail messaging as tool for Internet smoking cessation intervention, 235–240
content analysis of e-mail communications between patients and providers, 249–259
help for physicians contemplating use of e-mail with patients, 268–269 (Editorial Comments)
modeling patients' acceptance of provider-delivered E-health, 241–248
usability of computer-assisted interview system for unaided self-entry of patient data, 249–259
patient Internet use for health information at primary care clinics, 499–504
E-Mail
automated messaging as tool for Internet smoking cessation intervention, 235–240
content analysis of e-mail communications between patients and providers, 249–259

help for physicians contemplating use of e-mail with patients, 268–269 (Editorial Comments)
E-Prescribing, *see* Electronic prescribing systems
Education
in field of medical informatics
enhancing entrepreneurship and professionalism in collaborative training model, 317–319
report on impact of Biomedical Information Science and Technology Initiative (BISTI), 162–172
medical
method for annotating digital images for context-appropriate use in, 29–41
perceptions of impacts of computerized physician documentation in a teaching hospital, 300–309
use of personal digital assistants as a classroom polling tool, 217–220
patient
automated e-mail messaging as tool for smoking cessation intervention, 235–240
Ehnfors, Margreta, PhD
ACMI International Associate, 2003, 226–227
Electronic health records (EHR)
comparison of multiple data sources to identify vaccinations for veterans with spinal cord injuries and disorders, 377–379
data quality of in general practice, impact of assessments, feedback, and training on, 78–86
design and implementation of patient e-consent mechanisms using, 129–140
differences in satisfaction with, between residents of two medical specialties, 43–49
impacts of computerized physician documentation in a teaching hospital, 300–309
incorporating the International Classification of Functioning, Disability, and Health (ICF) into, to create indicators of function, 514–522
overcoming structural constraints to patient utilization of, 151–161
patient experiences with access to, and linked Web messaging, 505–513
patient-accessible, use in practice for congestive heart failure, 410–417
provisional domain model for the nursing process for use within Health Level 7 Reference Information Model, 186–194
use of data from for quality improvement in schizophrenia treatment, 351–357
Electronic medical records, *see* Electronic health records
Electronic order entry
information resources provided at, for antimicrobial prescribing, 281–284
Electronic prescribing systems
framework for evaluation of based on functional capabilities, 60–70
Special Focus on, 270–293
computerized reminders reduce use of medications during shortages, 278–280
information resources used in antimicrobial prescribing, 281–284
model for automated extraction and visualization of antimicrobial activity spectra, 285–293
structured representation of the pharmacodynamics section of the summary of product characteristics for antibiotics, 285–293
trial of automated safety alerts for inpatient digoxin use with computerized physician order entry, 270–277
Electronic screening
of dictated reports to identify patients with do-not-resuscitate orders, 403–409
Emergency department
asthma kiosk, for collaborative decision support in, 458–467
Encoding methods
automated encoding of clinical documents based on natural language processing, 392–402
Enriched Semantic Network
in Unified Medical Language System (UMLS), with multiple subsumption hierarchy, 195–206
Entity-Attribute-Value (EAV) approach
and portability of informatics capabilities from a clinical application to a bioscience application, 294–299
Errors, medical
framework for evaluation of outpatient electronic prescribing systems, 60–70
organization and representation of patient safety data, 468–478
system-related, in patient care information systems, 104–112
use of Palm-based Clinical Information System (PalmCIS) to reduce, 19–28
Web-based event reporting system, development of in academic environment, 11–18
Event reporting system
Web-based, development of in academic environment, 11–18
eXperimental Description (XDesc)
portability of informatics capabilities from a clinical application to a bioscience application, 294–299
eXtensible Markup Language (XML)
method for annotating digital images for context-appropriate use in, 29–41

F
Faculty, medical school
perceptions of impacts of computerized physician documentation in a teaching hospital, 300–309
Friedman, Robert H., MD
ACMI Fellow, 2003, 227
Functional status information
incorporating the International Classification of Functioning, Disability, and Health (ICF) into an electronic health record to create, 514–522

G
General practice
data quality of EHRs in, impact of assessments, feedback, and training on, 78–86
Genetics Home Reference
new consumer resource of National Library of Medicine, 439–447
Genomics
pilot of Query Integrator System for databases in, 529–530

Geriatrics
strategies for detecting adverse drug events among older persons in ambulatory setting, 492–498
Goltra, Peter, MD
recipient of AMIA President's Award for 2003, 234
Guideline Elements Model
systematic document-centered approach to guideline implementation, 418–426
GuideLine Interchange Format (GLIF)
shared modeling language from InterMed, 1–10
architectural lessons, 4–5
cognitive studies to evaluate, 3–4
design principles for guideline model and exchange format, 5–6
fostering sharing of GLIF3 CIG model, 6–8
life cycle for development of, 2–3
relationship with other guideline formalisms, 8
work process for multi-institutional development of, 2
Guidelines, clinical
comparative impact of electronic access to guidelines, clinical data, and decision support on prescribing decisions, 71–77
computerized clinical reminders for HIV care, human factors barriers to effective use of, 50–59
pragmatics of implementing, 436–438 (Editorial Comments)
systematic document-centered approach to implementation of, 418–426
Guidelines, for clinical care
computer-interpretable
GuideLine Interchange Format (GLIF) from InterMed, 1–10
Gustafson, David H.
ACMI Fellow, 2003, 227–228

H
Hammond, William E, II, PhD
presentation of Morris F. Collen Award to, 221–224
Handheld technology
Al-Ubaydli: *Handheld Computers for Doctors* (Book Review), 42
development of drug information retrieval system in interdisciplinary medical informatics training program, 317–319
Palm-based Clinical Information System (PalmCIS), reducing medical errors via use of, 19–28
Hannan, Terry John, MBBS
ACMI International Associate, 2003, 228
Health information retrieval, *see* Retrieval
Health Level 7 Reference Information Model
development of provisional domain model for nursing process for use within, 186–194
Health-related Internet applications, *see* E-Health
Health-seeking behavior
and patient Internet use for health information at primary care clinics, 499–504
Hospitals
computerized physician order entry (CPOE) in U.S. hospitals, results of 2002 survey, 95–99
implementing inpatient clinical note capture via a provider order entry system, 310–316
see also Academic health care settings
Human Brain Project
framework for interoperability of bioscience databases, 523–534
Human Genome Project
design of Genetics Home Reference for consumers, 439–447
Human immunodeficiency virus (HIV)
human factors barriers to effective use of ten computerized clinical reminders for HIV care, 50–59
Hypertension
organizational issues in implementation of ATHENA DSS, 368–376

I
Images, digital
method for annotating for context-appropriate use, 29–41
Implementation
of a computerized physician order entry system in a large Dutch university medical center, 207–216
of ATHENA DSS for hypertension, organizational issues in, 368–376
of clinical practice guidelines
pragmatics of, 436–438 (Editorial Comments)
systematic document-centered approach to, 418–426
Indexing
protein-based Medline, dictionary-based approach for identification of protein names, 174–178
Individually timed educational messages
automated e-mail messaging as tool for Internet smoking cessation intervention, 235–240
Infectious disease
implementing syndromic surveillance, 141–150
Informaticians
report on impact of Biomedical Information Science and Technology Initiative (BISTI) on training of, 168–169
Informatics, medical
National Health Information Infrastructure (NHII), consensus action agenda for achieving, 332–338 (Position Paper)
portability of informatics capabilities from a clinical application to a bioscience application, 294–299
report on impact of Biomedical Information Science and Technology Initiative (BISTI) on training in, 168–169
role in bridging the digital divide to reach vulnerable populations, 448–457 (AMIA White Paper)
Information retrieval, *see* Retrieval, of health information
Information systems, patient care, *see* Patient care information systems
Information technology (IT)
models of IT acceptance among patients, 241–248
see also Applications, of information technology
Inpatient care, *see* Hospitals
Interactive learning
use of personal digital assistants as a classroom polling tool, 217–220
InterMed
GuideLine Interchange Format (GLIF) from, 1–10
Internal medicine residents
differences in satisfaction with electronic health records compared with pediatrics residents, 43–49

International Classification of Functioning, Disability, and Health (ICF)
incorporating into an electronic health record to create indicators of function, 514–522
Internet, *see also* E-Health *and* Web-based applications
automated e-mail messaging as tool for smoking cessation intervention on, 235–240
patient use of for health information at primary care clinics, 499–504
Interview system
computer-assisted, usability of for unaided self-entry of patient data, 249–259

J
Jaffe, Charles, MD, PhD
ACMI Fellow, 2003, 228
Johnson, Kevin B., MD, MS
ACMI Fellow, 2003, 228–229
***Journal of the American Medical Informatics Association* (JAMIA)**
Student Editorial Review Board, 87–88

L
Lacroix, Eve-Marie, MS
ACMI Fellow, 2003, 229

M
Marchibroda, Janet
AMIA Connecting for Health Award, 234
Masarie, Fred E. "Chip," Jr., MD
ACMI Fellow, 2003, 229–230
Medical errors, *see* Errors, medical
Medical Informatics Network Tool (MINT)
network-based system to improve care of chronic illness, use in schizophrenia treatment, 358–367
Medical informatics, *see* Informatics, medical
Medical narrative, *see* Narrative, medical
Medical records, *see* Records, medical
Medical schools, *see* Education, medical
Medications
computerized reminders reduce use of medications during shortages of, 278–280
drug database model as central element for computer-supported dose adjustment within a CPOE system, 427–432
management of, framework for evaluation of outpatient electronic prescribing systems, 60–70
see also Adverse drug events
Medline
dictionary-based approach for identification of proteins in Medline abstracts, 174–178
Mental health
network-based system to improve care for schizophrenia, 358–367
use of electronic medical record data for quality improvement in schizophrenia treatment, 351–357
Metadata management system
managing complex change in clinical study, 380–391
Microarray research
pilot of Query Integrator System for databases in, 529–530
portability of informatics capabilities from a clinical application to a bioscience application, 294–299
Model formulation
conceptual framework for evaluating outpatient electronic prescribing systems, 60–69
enriched Unified Medical Language System semantic network with multiple subsumption hierarchy, 195–206
provisional domain model for nursing process for use within Health Level 7 reference information model, 186–194
Query Integrator System as framework for biomedical database federation, 523–534
structured representation of pharmacodynamics section of *Summary of Product Characteristics* for antibiotics, 285–293
systematic document-centered approach to guideline implementation, 418–426
Modeling languages, shared
GuideLine Interchange Format (GLIF), 1–10

N
Name-of-substance (NOS) annotation
dictionary-based approach for identification of protein names in Medline abstracts using, 174–178
Narrative data, medical
row modeling applied to generic structured data entry in OpenSED, 162–165
National Health Information Infrastructure (NHII)
consensus action agenda for achieving, 332–338 (Position Paper)
National Library of Medicine (NLM)
design of Genetics Home Reference 439–447, 439–447
National Patient Care Database
role in quality improvement at Veterans' Health Administration (VHA), 348
Natural Language Processing (NLP)
automated encoding of clinical documents based on, 392–402
Neuroscience
pilot of Query Integrator System for databases in, 529
Note capture
implementing inpatient clinical note capture via a provider order entry system, 310–316
Nursing
provisional domain model for nursing process for use within Health Level 7 reference information model, 186–194
Nursing Information Reference Model
in development of provisional domain model for the nursing process for use within Health Level 7 Reference Information Model, 186–194

O
Older persons
strategies for detecting adverse drug events among in ambulatory setting, 492–498
Online clinical information resources
patient experiences with access to electronic health records and linked Web messaging, 505–513
survey of clinicians' use of to support patient care, 113–120
see also Patient care information systems

OpenSDE
row modeling applied to generic structures data entry, 162–165
Organizational issues
organizational issues in implementation of ATHENA DSS for hypertension, 368–376
Osheroff, J.A., MD, FACP
ACMI Fellow, 2003, 230
Outbreak detection
implementing syndromic surveillance, 141–150

P
Palm-based Clinical Information System (PalmCIS)
use of, to reduce medical errors, 19–28
Parents, of children with asthma
patient-centered technology for collaborative decision support in the emergency department, 458–467
Patient care information systems
clinicians' use of online evidence to support patient care, 113–120
computerized physician order entry (CPOE)
helpful or harmful?, 100–103
nature of system-related errors in, 104–112
pharmacist's role in, 125–126 (Letter), 127–128 (Reply)
physicians, information technology, and health care systems (Editorial Comments), 121–124
results of 2002 survey in U.S. hospitals, 95–99
electronic health records (EHR)
data quality of in general practice, impact of assessments, feedback, and training on, 78–86
differences in EHR satisfaction between residents of two medical specialties, 43–49
nature of errors in, 104–112
reducing medical errors via rapid access to, using PalmCIS, 19–28
Patient utilization
experiences with access to electronic health care records and linked Web messaging, 505–513
modeling patients' acceptance of provider-delivered E-health, 241–248
of electronic medical records, overcoming structural constraints to, 151–161
of Internet for health information at primary care clinics, 499–504
of patient-accessible electronic medical record in practice for congestive heart failure, 410–417
usability of computer-assisted interview system for unaided self-entry of patient data, 249–259
Patients
content analysis of e-mail communications between providers and, 249–259
help for physicians contemplating use of e-mail with patients, 268–269 (Editorial Comments)
PDAs, *see* Personal digital assistants
Pediatrics residents
differences in satisfaction with electronic health records compared with internal medicine residents, 43–49
Perl programming
Jamison: *Perl Programming for Biologists* (Book Review), 173
Personal digital assistants (PDAs)
Palm-based Clinical Information System (PalmCIS), reducing medical errors via use of, 19–28
use of as a classroom polling tool, 217–220
Pharmacists
role in computerized physician order entry systems, 125–126 (Letter), 127–128 (Reply)
Pharmacodynamics
model for extraction and visualization of antimicrobial activity spectra, 285–294
Physicians
Al-Ubaydli: *Handheld Computers for Doctors* (Book Review), 42
assessment of patient-accessible electronic medical record in practice for congestive heart failure, 410–417
computerized physician order entry (CPOE)
helpful or harmful?, 100–103
implementation of CPOE system in a large Dutch university medical center, 207–216
physicians, information technology, and health care systems (Editorial Comments), 121–124
results of 2002 survey on use in U.S. hospitals, 95–99
physicians, information technology, and health care systems (Editorial Comments), 121–124
survey of use of online evidence to support patient care, 113–120
see also Residents
Polling, interactive
using personal digital assistants as a classroom polling tool, 217–220
Position Papers
consensus action agenda for achieving the National Health Information Infrastructure, 332–338
Potassium testing
computer alerts for, 433–434 (Letter), 435 (Reply)
Prescribing decisions
clinical impact of electronic access to guidelines, clinical data, and computerized decision support, 71–77
computerized reminders reduce use of medications during shortages, 278–280
information resources used during antimicrobial prescribing, 281–284
Prescribing systems, electronic
framework for evaluation of based on functional capabilities, 60–70
Special Focus on, 270–293
computerized reminders reduce use of medications during shortages, 278–280
information resources used in antimicrobial prescribing, 281–284
model for automated extraction and visualization of antimicrobial activity spectra, 285–293
trial of automated safety alerts for inpatient digoxin use with computerized physician order entry, 270–277
Primary care
content analysis of e-mail communications between patients and providers, 249–259
model for automated extraction and visualization of antimicrobial activity spectra, 285–293
patient Internet use for health information at primary care clinics, 499–504

Primary care practices
data quality of EHRs in, impact of assessments, feedback, and training on, 78–86
Privacy issues
with patient e-consent, 129–140
Proteins
dictionary-based approach for identification of protein names in Medline abstracts, 174–178
ProtScan
dictionary-based approach for identification of proteins in Medline abstracts, 174–178
Providers, health care, *see also* Physicians
content analysis of e-mail communications between patients and, 249–259
help for physicians contemplating use of e-mail with patients, 268–269 (Editorial Comments)
Public health
implementing syndromic surveillance, 141–150

Q
Quality Enhancement Research Initiative (QUERI)
of the Veterans' Health Administration (VHA)
comparing multiple data sources to identify vaccinations for veterans with spinal cord injuries and disorders, 377–379
implementing automated decision support for hypertension, 368–376
in mental health
network-based system to improve care for schizophrenia, 358–367
use of electronic medical record data for quality improvement in schizophrenia treatment, 351–357
informatics resources to support, 344–350
overview of, 339–343
Quality of care
for HIV, human factors barriers to effective use of ten computerized clinical reminders, 50–59
Quality of data
of EHRs in general practice, impact of assessments, feedback, and training on, 78–86
Query Integrator System (QIS)
as framework for biomedical database federation, 523–534
Questionnaires, paper-based
usability of computer-assisted interview system for unaided self-entry of patient data instead of, 249–259

R
Records, medical, electronic
data quality of EHRs in general practice, impact of assessments, feedback, and training on, 78–86
differences in EHR satisfaction between residents of two medical specialties, 43–49
overcoming structural constraints to patient utilization of electronic, 151–161
patient-accessible, use in practice for congestive heart failure, 410–417
reducing medical errors via rapid access to, using PalmCIS, 19–28
Rector, Alan L., MD, PhD
ACMI International Associate, 2003, 230–231
Reference Information Model
development of provisional domain model for nursing process for use within Health Level 7, 186–194
Reminders, computerized
for HIV care, human factors barriers to effective use of, 50–59
to reduce use of medications during shortages, 278–280
Residents
differences in satisfaction with electronic health records between pediatrics and internal medicine, 43–49
perceptions of impacts of computerized physician documentation in a teaching hospital, 300–309
Resources
used for information during antimicrobial prescribing, 281–284
Retrieval, of health information
development of handheld system for, in interdisciplinary medical informatics training program, 317–319
dictionary-based system for identification of protein names in Medline abstracts, 174–178
frequency-based technique to improve spelling suggestion rank in medical queries, 179–185
Row modeling
applied to generic structured recording of medical narrative data, 162–165

S
Safety alerts, automated
drug allergy alert overrides in computerized physician order entry systems, 482–491
for inpatient digoxin use with computerized physician order entry, 270–277
for potassium testing in patients on diuretics, 433–434 (Letter), 435 (Reply)
Safety, patient
organization and representation of data on, 468–478
issues around scalability and generalizability of representation, 471–473
risks and benefits of cellular radio telecommunication for health care, 479–481
Web-based event reporting system, development of in academic environment, 11–18
Sands, Daniel Z., MD, MPH
ACMI Fellow, 2003, 231
Satisfaction, user
with electronic health records (EHR), differences in between residents of two medical specialties, 43–49
Scalable Vector Graphics (SVG)
method for annotating digital images for context-appropriate use using, 29–41
Schizophrenia
network-based system to improve care of, 358–367
use of electronic medical record data for quality improvement in treatment of, 351–357
Schools, medical, *see* Education, medical
Screening, electronic
of dictated reports to identify patients with do-not-resuscitate orders, 403–409
Security services
for e-consent systems, 135

Semantic Network
enriched, in Unified Medical Language System (UMLS), with multiple subsumption hierarchy, 195–206
Shared modeling languages
GuideLine Interchange Format (GLIF), 1–10
Short Form Health Survey (SF-12)
incorporating the International Classification of Functioning, Disability, and Health (ICF) into an electronic health record to create indicators of function, 514–522
Shortages, of medications
computerized reminders reduce use of medications during, 278–280
Sievert, Mary Ellen C., PhD
ACMI Fellow, 2003, 231
Skiba, Diane J., PhD, FAAN
ACMI Fellow, 2003, 232
Smoking cessation intervention
automated e-mail messaging as tool for, 235–240
Software
method for annotating digital images for context-appropriate use, 29–41
Spelling correction tools
technique to improve spelling suggestion rank in medical queries, 179–185
Spinal cord injuries and disorders
comparison of multiple data sources to identify vaccinations for veterans with, 377–379
Student Editorial Review Board, for *JAMIA*, 87–88
Subsumption hierarchy
enriched Unified Medical Language System Semantic Network with multiple, 195–206
Summary of Product Characteristics
model for automated extraction and visualization of antimicrobial activity spectra from, 285–294
Surveillance, *see* Syndromic surveillance
Syndromic surveillance
implementation of, 141–150
System Providing Patients Access to Records Online (SPPARO)
use of a patient-accessible electronic medical record in practice for congestive heart failure, 410–417

T
Tang, Paul, MD
recipient of AMIA President's Award for 2003, 234
Teaching hospitals, *see* Academic health care settings
Technical briefs
OpenSED: row modeling applied to generic structures data entry, 162–165
Telecommunications
cellular radio, for health care, benefits and risks, 479–481
Terminology, medical
frequency-based technique to improve spelling suggestion rank in medical queries, 179–185
Text, clinical
automated encoding of based on natural language processing, 392–402
Training, in medical informatics
enhancing entrepreneurship and professionalism by a collaborative training model, 317–319
impact of, on data quality of EHRs in general practice, 78–86
report on impact of Biomedical Information Science and Technology Initiative (BISTI), 162–172
elements of effective, 169–171
landscape of informatics, 168–169
quality of, 171–172
Transaction models
for patient e-consent systems, 138–140
Trial DB
managing complex change in clinical study metadata with, 380–391
Tu, Sampson W., MS
ACMI Fellow, 2003, 232

U
Undergraduate training, in medical informatics
enhancing entrepreneurship and professionalism by a collaborative training model, 317–319
Unified Medical Language System (UMLS)
Enriched Semantic Network with multiple subsumption hierarchy, 195–206
Unified Medical Language System (UMLS) automated encoding of clinical text to, based on natural language processing, 392–402
User satisfaction
with electronic health records (EHR), differences in between residents of two medical specialties, 43–49

V
Vaccinations
comparison of multiple data sources to identify for veterans with spinal cord injuries and disorders, 377–379
Veterans' Health Administration (VHA)
Computerized Patient Record System (CPRS) at
as data source for QUERI, 346–348
computerized physician documentation in, impact at a teaching hospital, 300–309
information resources used in antimicrobial prescribing with, 281–284
Decision Support System, 348
National Patient Care Database, 348
Quality Enhancement Research Initiative (QUERI)
comparing multiple data sources to identify vaccinations for veterans with spinal cord injuries and disorders, 377–379
implementing automated decision support for hypertension, 368–376
in mental health
network-based system to improve care for schizophrenia, 358–367
use of electronic medical record data for quality improvement in schizophrenia treatment, 351–357
informatics resources to support, 344–350
clinical information systems, 345–348
linking research tools and development with clinical operations and policy, 348–350
national database systems, 348
overview of, 339–343

Veterans Health Information Systems and Technology Architecture (VistA)
as data source for QUERI, 345–348
Vulnerable populations
bridging the digital divide to reach, 448–457 (AMIA White Paper)

W
Warren, Judith J., PhD, RN
ACMI Fellow, 2003, 232–233
Web messaging
patient experiences with access to electronic health care records and linked, 505–513
Web-based applications
automated e-mail messaging as tool for Internet smoking cessation intervention, 235–240
event reporting system, development of in academic environment, 11–18
of e-mail communications between patients and providers, 249–259
Wireless technology
Palm-based Clinical Information System (PalmCIS), reducing medical errors via use of, 19–28
using personal digital assistants as a classroom polling tool, 217–220
Word sense disambiguation
multi-aspect comparison study of supervised, 320–331
